Krider's Ten Commandments On Rose Growing

- 1st. **Location.** Rose bed should be in a sunny location and the soil should be of good garden grade and well drained.
- 2nd. **Care Before Planting.** Unpack and plant Roses as soon as received from the nursery. If you cannot plant at once, heel them in the ground until ready to plant.
- 3rd. **Planting.** In planting, set the plants with the bud, or joint, just above the roots, about 1½ inches below the surface of the soil. Have holes large enough to avoid crowding of the roots. Tramp soil firmly as the hole is filled and leave a slight depression around each plant to retain water. Allow 18 to 24 inches between plants when figuring the number of plants needed for a bed.
- 4th. **Care After Planting.** If some plants appear dead and refuse to leaf out within a reasonable length of time after planting, try covering them with a piece of wet burlap. Soak the burlap with water two or three times daily. This will make most of them start leafing very soon. Try it, and you will be amazed at the results.
- 5th. **Pruning.** As soon as planting is completed see that all plants and the soil around them is thoroughly soaked with water. Cut back all canes to a length of 4 to 5 inches at planting time. This is very important as the root system of a newly transplanted Rose bush will not be able to leaf the canes to their entire length and many times plants will simply die in trying to do so.
- 6th. **Fertilizing.** Keep the Rose planting well watered at all times when there is no natural rainfall. Applications of fertilizer during the summer months, 30 days between applications, will induce growth and quality in blooms. We recommend RA-PID-GRO.
- 7th. **Cultivation.** Frequent cultivation after planting will maintain a dust mulch on top of the soil which will conserve moisture and continue growth.
- 8th. **Spraying.** For leaf spot and aphid, apply Krider's Multi-Purpose Spray or Dust. Apply every two weeks or so as often as needed. For slug or leaf eating worms apply arsenate of lead.
- 9th. **Watering.** Don't sprinkle beds—wet them thoroughly. If a hose is used, remove the nozzle and let the water soak into the ground until it is saturated.
- 10th. **Preparation of Soil.** Any soil that will grow good Potatoes or garden plants will grow good Roses. It is not necessary that the Rose bed be entirely of clay soil. Good thoroughly enriched gravel or loam soil will grow as good Roses as clay. Ground should be spaded and well worked.

Giant Flowering Hardy Hybrid Primroses

DO NOT ALLOW YOUR PHLOX TO GO TO SEED—This is Very Important

Keep blooms cut as they fade. If you permit plants to go to seed they will drop hundreds of seeds right around the base of the plant. Next year masses of seedlings will spring up. These usually have the old magenta color and soon kill out your true variety. This soon makes the bed a mass of seedlings.

4134 "POOR MAN'S ORCHID"

IRIS SHILKA

Many years ago as a crowded, uncomfortable train puffed its way across the endless barren plains of Siberia, Prof. Hansen, an American passenger, was electrified by the sight of patches of what appeared to be Orchids blooming in that desolate region, near the small town of Shilka. As the train stopped at the station, Prof. Hansen left it to satisfy his curiosity. When he made a closer inspection of the plants he found them to be of the Iris family, but their form and color so closely resembled the Orchid that he immediately thought of the descriptive phrase, "Poor Man's Orchid." He secured several of the plants and brought them home to America with him. Several years of propagation and development showed them to be perfectly adapted to our climate and they were placed on the market under the name of **Iris Shilka**, recalling the name of the Siberian town where they were first found. We offer nice field-grown plants, blooming size, 50c each; 4 for \$1.60, postpaid.

4159 HARDY PULMONARIA

In the spring the whole bed is aglow with hundreds of small, bell-shaped, reddish lavender blooms. Excellent as ground cover, also as a dwarf edging plant. 4109 "BLUE BIRD" VERONICA

Gentlemen:

We have a very colorful yard, but nothing outclasses the "Crimson Rocket." It is not only colorful, but is so easily kept in bounds by pruning and responds so readily to average care. It is not particular as to the kind of soil, though we do fertilize just as we do our Roses. We heartily recommend them to our friends.

4169 TEUCRIUM - Beautiful Perennial Hedge or Edging

Ideal for all edging work, or for low border hedges. Foliage is evergreen for ten months of the year and plants stay dwarf. Ten to fifteen inches is as high as they grow and an occasional very light trimming will hold their beautiful compact shape.

Hardy in all sections of the country and thrives in most any location. Ideal in front of low walls.

Should be planted 6 inches apart for a dense hedge. Note how effective Teucrium is when edging a perennial bed as illustrated.

Four to five plants in a group will make an ideal corner clump for a perennial bed or the corners of a Rose garden.

Don't fail to get some of these plants for that dwarf hedge you've been wanting.

4170 IBERIS—DWARF HARDY CANDYTUFT

ALMOST EVERGREEN**

One of the loveliest of the semi-dwarf plants. Foliage is almost evergreen, remaining green until almost New Years. Each spring the plant is covered so densely with white, snow-flake-shaped blooms that it really resembles a small mound of snow. Very hardy, easily grown and requires only average garden soil. Reaches only about 12 inches in height, which makes it invaluable for the foreground in perennial beds or for low borders.

**Nice 2-Yr. Plants, 40c each; 4 for \$1.50;
10 for \$3.50; 25 for \$6.50, postpaid.**

One of the hardiest of all plants, it seems to thrive under the most difficult conditions. Withstands heat, drought, cold, and shallow, poor soil. Foliage is ornamental all summer long and the large, flat heads of clear pink blooms are produced on sturdy stems and in abundance. Plant ordinarily reaches 12 to 18 inches in height with bloom stems rising 10 to 12 inches above foliage during blooming season.

One of the greatest features of "Sedum Spectabilis" is its versatility. Use it as a flowering perennial in the foreground of the bed or border; plant it among low growing shrubs for increased foliage and color effects; set one plant in each of two pots or pails and use them on each side of the steps; place plants 12 or 16 inches apart in porch or window boxes; best of all is its extreme hardiness and the ease with which it can be grown.

EVERGREENS FOR ELEGANCE ALL THE YEAR AROUND

Colorado Blue Spruce

5208 COLORADO BLUE SPRUCE

One of the hardiest and most beautiful of all evergreens for specimen planting. Should have plenty of room to develop its branches and stately form. Since Colorado Blue Spruce are grown from seed there is some variation in the blue shading, especially when the trees are young. Should be planted where they have plenty of sunshine to get best color effect. Very young trees are not particularly shapely but the typical symmetrical form comes as the plants grow to 3 feet or more in height. Due to scarcity of Blue Spruce, we can offer only **4-year, field-grown, 12-15 in., stocky plants at \$3.00 each; 2 for \$5.00, postpaid.** Buy several of them at this low price.

5206 Pyramidal ARBOR-VITAE

Globe Arbor-Vitae

Pyramidal Arbor-Vitae

5210 SPREADING YEW

The spreading variety throws out sweeping branches similar to Pfitzer Juniper. May be kept trimmed back to desired size or to fit allotted space. Foliage is a shade of deep green, soft to the touch and always fresh looking. May be kept sheared for a low hedge, allowed to grow its graceful wand-like branches for informal corner plantings or trimmed into compact shape for formal effects. After the plant is several years old, numerous red berries are borne close to the branches, remaining into winter. **Well rooted, 12- to 15-inch, \$2.90 each; 2 for \$5.50, prepaid.**

5211 UPRIGHT YEW

8602 CHRISTMAS HOLLY

(Ilex Opaca)

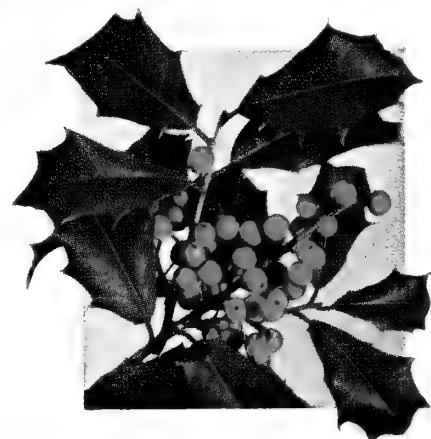

**FOR HAPPY HOLIDAYS
GROW YOUR OWN CHRISTMAS HOLLY**

KRIDER'S SEXED TREES. MALE AND FEMALE. GUARANTEED TO PRODUCE BERRIES.

Holly is beautiful the year around, but in winter when other evergreens become drab and brownish it is the one plant in your garden that sparkles. The leaves are deep dark green and the brilliant red of the berries really stand out against this background. Guests coming to your home cannot pass a berried Holly tree without noticing it. After years of study, selection and breeding, we have succeeded in propagating separate species, male and female, which are extremely hardy and easy pollinating to assure plenty of berries. **If you are to have berries on your female Holly**

you must have a pollinating male companion. Christmas Holly will do best in partial shade. Plant in any good garden soil. The use of leaf mold or peat moss in planting and later as a mulch is recommended. Holly can be used any place in your garden where you would plant a pyramidal evergreen, but we recommend planting where it may be seen from your windows.
